

# Garden to Connect @ NEXT Library - stay in touch

Lovely meeting all you NEXT Library-people at Expo, session and outside the SDG-lab.

Stay connected and do get in touch, when you are ready to create a sustainable, democratic and playfull garden. We love to co-operate.

# Garden to Connect @ NEXT Library - about 1/3

**Garden to Connect** are urban gardens made from up-cycled plastic-pipes, cut-offs from construction sites.

These tiny gardens provide a practical connection from soil and plants to Sustainable Development Goals and Inner Development Goals (SDG's and IDG's).

They demonstrate, how access to grow plants relates to democracy and how gardening can be playful, instructive and social all at once.

# Garden to Connect @ NEXT Library - about 2/3

No matter how urban or small a bit of nature we engage in:

- It activates our sense of belonging,
- it supports co-operation and mutual learning,
- it bridges language barriers, and
- it opens a 'garden of options' to unfold.

The tiny pipe gardens are excellent laboratories for working with biodiversity, food production, compost and seed-collection - just to mention a few subjects on the green agenda.

Gardens also provide a brilliant stage for co-operation with civil society, individuals as well as institutions, from kindergardens to nursing homes, a place to gather and share stories.
